Module Catalogue

Master's Programme: Biochemie (Master of Science, M.Sc.)

(120 ECTS credits)

Based on the *Prüfungs- und Studienordnung* of 1 January 2015

88/025/---/M0/H/2015

Issued on XX XXXXXXXXXX XXXX

Index

Abbrevations and annotations

CP	Credit Points, ECTS credits
ECTS	European Credit Transfer and Accumulation System
h	hours
SoSe	summer semester
SWS	contact hours
WiSe	winter semester
WP	compulsory elective Module / course
P	mandatory Module / course

1. The ECTS credits assigned in the Module Catalogue are designated as follows: Credit Points not listed in parentheses are awarded when the pertinent examination of the Module or Module parts have/has been completed successfully. Credit Points in parentheses are listed for calculatory purposes only.

2. The semester for taking a Module can either be binding or may be considered as a recommendation, depending on the applicable data in Anlage 2 of the *Prüfungs- und Studienordnung* for your Programme. In this Module catalogue, the options are indicated as "scheduled semester" and "recommended semester".

3. Please note: The Module Catalogue is merely intended to serve as an orientation whereas the provisions of the applicable version of the *Prüfungs- und Studienordnung* (in German only) of your Programme are legally binding. See: www.lmu.de/studienangebot and select your Programme.

Module: P 1 Main topic Biochemistry - practical course

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Practical laboratory course	P 1.1 Advanced research practical course in Biochemistry	WiSe and SoSe	240 h (16 SWS)	120 h	(12)
Seminar	P 1.2 Advanced seminar in Biochemistry	WiSe and SoSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 15 ECTS credits have to be acquired. Class attendance averages about 18 contact hours. Including time for self-study, 450 hours have to be invested.

Module type	Mandatory module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	None
Entry requirements	None
Semester	Recommended semester: 1
Duration	The completion of the module takes 1 semester.
Content	Students work in a research group from the field of Biochemistry. Supervised by a professional scientist students get involved in a current research project. During the **practical course** they apply modern techniques and complement and deepen their methodical skills and theoretical knowledge. Students learn to plan and execute scientific experiments independently. At the **accompanying seminar** students extend their expertise of the research topic and present and discuss their own research results.
Learning outcomes	Students acquire expertise for work in research: - independent, target-oriented literature search - transfer of theoretical knowledge to practical applications - planning and execution of complex experimental set-ups - recognition and estimation of security questions while handling hazardous material - decision making and critical interpretation and evaluation of experimental data - appraisal, presentation and discussion of research data and results

Type of examination	Practical course report or practical course evaluation
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Beckmann
Language(s)	English
Additional information	

Module: P 2 Main Topic Biochemistry I

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	P 2.1 Life cycle of proteins	WiSe	30 h (2 SWS)	60 h	(3)
Lecture	P 2.2 Flow of genetic information	WiSe	30 h (2 SWS)	60 h	(3)
Lecture	P 2.3 Model organisms	SoSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 9 ECTS credits have to be acquired. Class attendance averages about 6 contact hours. Including time for self-study, 270 hours have to be invested.

Module type	Mandatory module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	None
Entry requirements	None
Semester	Recommended semester: 1
Duration	The completion of the module takes 2 semesters.
Content	The module broadens and deepens special professional knowledge from the field of Biochemistry. The lectures cover key aspects of protein biochemistry, genome biology, and the most important model organisms used in modern research.
Learning outcomes	Students are introduced to up-to-date topics of current research in Biochemistry. They broaden their already acquired knowledge with current and special topics from Biochemistry. New information get integrated in existing knowledge to formulate and discuss scientific problems. The acquired theoretical knowledge will be implemented during the practical course.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Hopfner
Language(s)	English

Additional information

Module: P 3 Fundamentals in data analysis

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	P 3.1 Practical Bioinformatics	WiSe and SoSe	15 h (1 SWS)	30 h	(1,5)
Exercise course	P 3.2 Tutorial in practical Bioinformatics	WiSe and SoSe	15 h (1 SWS)	30 h	(1,5)
Lecture	P 3.3 Statistics and data analysis	WiSe and SoSe	15 h (1 SWS)	30 h	(1,5)
Exercise course	P 3.3 Tutorial statistics and data analysis	WiSe and SoSe	15 h (1 SWS)	30 h	(1,5)

For successful completion of the module, 6 ECTS credits have to be acquired. Class attendance averages about 4 contact hours. Including time for self-study, 180 hours have to be invested.

Module type	Mandatory module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	None
Entry requirements	None
Semester	Recommended semester: 1
Duration	The completion of the module takes 1 semester.
Content	The module will introduce basic quantitative skills essential for understanding modern methods in structural biology and functional genomics. The module covers the application of bioinformatic methods to problems in biochemstry research and the implementation of statistics and data analysis to work on scientific problems. During accompaning tutorials the acquired knowledge will be practised.
Learning outcomes	Students acquire knowledge in basic and advanced quantitative methods and the skills to apply these methods to biologycal examples. They have the skills to use bioinformatic methods, statistics and data analysis to critical evaluate experimental data.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective

	compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Gaul
Language(s)	English

Module: WP 1 Extension topic Lecture on Molecular System Biology

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 1.1 Lecture on Molecular System Biology	WiSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 3 ECTS credits have to be acquired. Class attendance averages about 2 contact hours. Including time for self-study, 90 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. Regarding the individual choice of modules, there are two options. *Option A:* From the compulsory elective fields "Extension Topic Molecular System Biology", "Extension Topic Structural Biology", "Extension Topic Molecular and Celeular Genetics", "Extension Topic Genetics", "Extension Topic Human Biology", "Extension Topic Molecular Plant Sciences", "Extension Topic Immunology", "Extension Topic Cell Biology", "Extension Topic Microbiology", "Extension Topic Virology", "Extension Topic Evolutionary Biology", "Extension Topic Neurobiology", „Extension Topic Informatics", "Subject-specific Extension Topic to Biochemistry", "Extension Topic Biological Chemistry", "Extension Topic Inorganic Chemistry", "Extension Topic Organic Chemistry", "Extension Topic Physical Chemistry" and "Extension Topic Theoretical Chemistry", three compulsory elective fields must be taken. In doing so, from the compulsory elective modules WP 1 - WP 7, WP 10 - WP 26 and WP 33 - WP 51, 1. for the compulsory elective field "Extension Topic Molecular System Biology", the compulsory elective modules WP 1, WP 10 and WP 11, 2. for the compulsory elective field "Extension Topic Structural Biology", the compulsory elective modules WP 2, WP 12 and WP 13,

3. for the compulsory elective field "Extension Topic Molecular and Cellular Genetics", the compulsory elective modules WP 3 and WP 14,
4. for the compulsory elective field "Extension Topic Genetics", the compulsory elective modules WP 4 and WP 15,
5. for the compulsory elective field "Extension Topic Human Biology", the compulsory elective modules WP 5 and WP 16,
6. for the compulsory elective field "Extension Topic Molecular Plant Sciences", the compulsory elective modules WP 6 and WP 17,
7. for the compulsory elective field "Extension Topic Immunology", the compulsory elective modules WP 7 and WP 18,
8. for the compulsory elective field "Extension Topic Cell Biology", the compulsory elective modules WP 19 and WP 33,
9. for the compulsory elective field "Extension Topic Microbiology", the compulsory elective modules WP 20 and WP 34,
10. for the compulsory elective field "Extension Topic Virology", the compulsory elective modules WP 21 and WP 35,
11. for the compulsory elective field "Extension Topic Evolutionary Biology", the compulsory elective modules WP 22 and WP 36,
12. for the compulsory elective field "Extension Topic Neurobiology", the compulsory elective modules WP 23 and WP 37,
13. for the compulsory elective field "Extension Topic Informatics", from the compulsory elective modules WP 24 - WP 26, WP 38 and WP 39, modules with a total value of 15 ECTS credits,
14. for the compulsory elective field "Subject-specific Extension Topic to Biochemistry", the compulsory elective modules WP 40 and WP 41,
15. for the compulsory elective field "Extension Topic Biological Chemistry", the compulsory elective modules WP 42 and WP 43,
16. for the compulsory elective field "Extension Topic Inorganic Chemistry", the compulsory elective modules WP 44 and WP 45,
17. for the compulsory elective field "Extension Topic Organic Chemistry ", the compulsory elective modules WP 46 and WP 47,
18. for the compulsory elective field "Extension Topic Physical Chemistry ", the compulsory elective modules WP 48 und WP 49,
19. for the compulsory elective field "Extension Topic Theoretical Chemistry ", the compulsory elective modules WP 50 and WP 51

must be taken.

Option B:

From the compulsory elective fields "Extension Topic Molecular System Biology", "Extension Topic Structural Biology", "Extension Topic Molecular and Celeular Genetics", "Extension Topic Genetics", "Extension Topic Human Biology", "Extension Topic Molecular Plant Sciences", "Extension Topic Immunology", "Extension Topic Cell Biology", "Extension Topic Microbiology", "Extension Topic Virology", "Extension Topic Evolutionary Biology", "Extension Topic Neurobiology", „Extension Topic Informatics", "Subject-specific Extension Topic to Biochemistry", "Extension Topic Biological Chemistry", "Extension Topic Inorganic Chemistry", "Extension Topic Organic Chemistry", "Extension Topic Physical Chemistry" and "Extension Topic Theoretical Chemistry", one compulsory field must be taken.

In doing so, from the compulsory elective modules WP 1 - WP 7, WP 10 - WP 26 and WP 33 - WP 51,

1. for the compulsory elective field "Extension Topic Molecular System Biology", the compulsory elective modules WP 1, WP 10 and WP 11,
2. for the compulsory elective field "Extension Topic Structural Biology", the compulsory elective modules WP 2, WP 12 and WP 13,
3. for the compulsory elective field "Extension Topic Molecular and Cellular Genetics", the compulsory elective modules WP 3 and WP 14,
4. for the compulsory elective field "Extension Topic Genetics", the compulsory elective modules WP 4 and WP 15,
5. for the compulsory elective field "Extension Topic Human Biology", the compulsory elective modules WP 5 and WP 16,
6. for the compulsory elective field "Extension Topic Molecular Plant Sciences", the compulsory elective modules WP 6 and WP 17,
7. for the compulsory elective field "Extension Topic Immunology", the compulsory elective modules WP 7 and WP 18,
8. for the compulsory elective field "Extension Topic Cell Biology", the compulsory elective modules WP 19 and WP 33,
9. for the compulsory elective field "Extension Topic Microbiology", the compulsory elective modules WP 20 and WP 34,
10. for the compulsory elective field "Extension Topic Virology", the compulsory elective modules WP 21 and WP 35,
11. for the compulsory elective field "Extension Topic Evolutionary Biology", the compulsory elective modules WP 22 and WP 36,
12. for the compulsory elective field "Extension Topic Neurobiology", the compulsory elective modules WP 23 and WP 37,
13. for the compulsory elective field "Extension Topic Informatics", from the compulsory elective modules WP 24 - WP 26, WP 38 and WP 39, modules with a total value of 15

ECTS credits,

14. for the compulsory elective field "Subject-specific Extension Topic to Biochemistry", the compulsory elective modules WP 40 and WP 41,
15. for the compulsory elective field "Extension Topic Biological Chemistry", the compulsory elective modules WP 42 and WP 43,
16. for the compulsory elective field "Extension Topic Inorganic Chemistry", the compulsory elective modules WP 44 and WP 45,
17. for the compulsory elective field "Extension Topic Organic Chemistry ", the compulsory elective modules WP 46 and WP 47,
18. for the compulsory elective field "Extension Topic Physical Chemistry ", the compulsory elective modules WP 48 und WP 49,
19. for the compulsory elective field "Extension Topic Theoretical Chemistry ", the compulsory elective modules WP 50 and WP 51

must be taken.

From the compulsory elective fields "Main Topic Zellbiologie", "Main Topic Mikrobiologie", "Main Topic Anorganische Chemie", "Main Topic Organische Chemie", "Main Topic Physikalische Chemie" and "Main Topic Theoretische Chemie", one compulsory elective field must be taken.

In doing so, from the compulsory elective modules WP 8, WP 9, WP 27 - WP 32 and WP 52 - WP 57,

1. for the compulsory elective field "Main Topic Cell Biology", the compulsory elective modules WP 8, WP 27 and WP 52,
2. for the compulsory elective field "Main Topic Microbiology", the compulsory elective modules WP 9, WP 28 and WP 53,
3. for the compulsory elective field "Main Topic Inorganic Chemistry", the compulsory elective modules WP 29 and WP 54,
4. for the compulsory elective field "Main Topic Organic Chemistry", the compulsory elective modules WP 30 and WP 55,
5. for the compulsory elective field "Main Topic Physical Chemistry", the compulsory elective modules WP 31 and WP 56,
6. for the compulsory elective field "Main Topic Theoretical Chemistry", the compulsory elective modules WP 32 and WP 57

must be taken.

Once having taken the compulsory elective field "Extension Topic Cell Biology", you may not take the compulsory elective field "Main Topic Cell Biology".

	Once having taken the compulsory elective field "Extension Topic Microbiology", you may not take the compulsory elective field "Main Topic Microbiology ". Once having taken the compulsory elective field "Extension Topic Inorganic Chemistry", you may not take the compulsory elective field "Main Topic Inorganic Chemistry ". Once having taken the compulsory elective field "Extension Topic Organic Chemistry ", you may not take the compulsory elective field "Main Topic Organic Chemistry ". Once having taken the compulsory elective field "Extension Topic Physical Chemistry", you may not take the compulsory elective field "Main Topic Physical Chemistry ". Once having taken the compulsory elective field "Extension Topic Theoretical Chemistry", you may not take the compulsory elective field "Main Topic Theoretical Chemistry ".
Entry requirements	None
Semester	Recommended semester: 1
Duration	The completion of the module takes 1 semester.
Content	Regulation of transcription/translation from a genome-wide perspective (enhancer, promoter, general and specific transcription factors, chromatin), genome-wide identification of gene functions and pathways, analysis of regulatory networks
Learning outcomes	Introduce students the concepts and methods of MSB with topical examples; familiarize students with NGS and other high throughput experiments; forming and testing hypotheses using statistical data; prepare students for WP10 and WP11.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Gaul
Language(s)	English

Module: WP 2 Extension Topic Lecture on Structural Biology

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 2.1 Lectures on Structural Biology	WiSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 3 ECTS credits have to be acquired. Class attendance averages about 2 contact hours. Including time for self-study, 90 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	Master's Programme Chemistry
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Recommended semester: 1
Duration	The completion of the module takes 1 semester.
Content	This lecture covers modern structural biology at an advanced level. The focus is on methods to reveal the three-dimensional structure of proteins and multiprotein complexes, including X-ray crystallography and electron microscopy.
Learning outcomes	Students learn the theoretical and methodical basics to analyse the three-dimensional structure of proteins. The lecture prepares students to apply these methods during the laboratory course in Structural Biology and enables them to read and critical evaluate publications in Structural Biology.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 3.1 Posttranscriptional Gene Regulation	WiSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 3.2 Genetic Control of complex processes	SoSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 6 ECTS credits have to be acquired. Class attendance averages about 4 contact hours. Including time for self-study, 180 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	Master's Programme Chemistry
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Recommended semester: 1
Duration	The completion of the module takes 2 semesters.
Content	The module introduces special knowledge from the field of Molecular and Cellular Genetics. The lectures cover genetic mechanisms underlying complex cellular processes and the multiple levels of regulation of gene expression after transcription.
Learning outcomes	Students are introduced to up-to-date topics of current research in Molecular and Cellular Genetics. They acquire knowledge of special topics about regulation of gene expression and about genetic mechanisms controlling complex cellular processes. New information get integrated in existing knowledge to formulate and discuss scientific problems. The acquired theoretical knowledge will be implemented during the practical course
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of	ECTS credits will be granted when the module examination (or the

ECTS credits	examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Seminar	P 4.1 Subject-specific seminar in Biochemistry	SoSe	30 h (2 SWS)	60 h	(3)
Colloquium	P 4.2 Subject-specific colloquium in Biochemistry	WiSe und SoSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 6 ECTS credits have to be acquired. Class attendance averages about 4 contact hours. Including time for self-study, 180 hours have to be invested.

Module type	Mandatory module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	None
Entry requirements	None
Semester	Recommended semester: 2
Duration	The completion of the module takes 2 semesters.
Content	The module covers important and current literature and methods in Biochemistry and introduces up-to-date topics of research in Biochemistry. At the **seminar** students extend their expertise of current literature and methods in Biochemistry and present and discuss publications covering specific topics and methods. At the **colloquium** visiting professors and junior scientists present up-to-date research topics and results from the field of Biochemistry.
Learning outcomes	Students acquire expertise for work in research: - independent, target-oriented literature search - critical interpretion and evaluation of experimental data - appraisal, presention and discussion of research data and results - integration of the content of a specific scientific presentation into the broader context of the subject Biochemistry
Type of examination	Presentation or scientific journal
Type of assessment	The successful completion of the module will not be graded.

Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Förstemann
Language(s)	English

Additional information

Module: P 5 Methods in Life Sciences

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Practical laboratory course	P 5.1 Practical course in Life Sciences	WiSe and SoSe	150 h (10 SWS)	75 h	(7,5)
Seminar	P 5.2 Advanced seminar in Life Sciences	WiSe and SoSe	15 h (1 SWS)	30 h	(1,5)

For successful completion of the module, 9 ECTS credits have to be acquired. Class attendance averages about 11 contact hours. Including time for self-study, 270 hours have to be invested.

Module type	Mandatory module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	None
Entry requirements	None
Semester	Recommended semester: 2
Duration	The completion of the module takes 1 semester.
Content	Students work in a research group working in Life Sciences. Supervised by a professional scientist students get involved in a current research project. During the **practical course** they apply modern techniques and complement and deepen their methodical skills and theoretical knowledge. Students learn to plan and execute scientific experiments independently. At the **accompanying seminar** students extend their expertise of the research topic and present and discuss their own research results.
Learning outcomes	Students acquire expertise for work in research: - independent, target-oriented literature search - transfer of theoretical knowledge to practical applications - planning and execution of complex experimental set-ups - recognition and estimation of security questions while handling hazardous material - decision making and critical interpretion and evaluation of experimental data - appraisal, presention and discussion of research data and results

Type of examination	Presentation or report on the practical laboratory course
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Förstemann
Language(s)	English

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Practical laboratory course	WP 11.1 Practical course in Molecular System Biology	WiSe and SoSe	150 h (10 SWS)	120 h	(9)

For successful completion of the module, 9 ECTS credits have to be acquired. Class attendance averages about 10 contact hours. Including time for self-study, 270 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	Successful completion of module WP 1
Semester	Recommended semester: 2
Duration	The completion of the module takes 1 semester.
Content	Generating and analysing NGS data (Nucleosome mapping); Small scale functional RNAi screen and analysis of cell number/morphology (S2 cells); Measure and analyse binding affinity landscape of a transcription factor;
Learning outcomes	Hands-on experience with different experimental high throughput methods; Hands-on experience with different types of data analysis, including NGS and image analysis, and the underlying statistics. This utilizes and expands their training from the 'Data analysis' module, with intense exposure to important computational methods. Sensitize students to potential and pitfalls of high throughput experiments
Type of examination	Written report on or assessment of the practical laboratory course or written report on and assessment of the practical laboratory course
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of	ECTS credits will be granted when the module examination (or the

ECTS credits	examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.

Entry requirements	Successful completion of module WP 2
Semester	Recommended semester: 2
Duration	The completion of the module takes 1 semester.
Content	The students perform basic crystallization trials, assess the amino acid sequence using bioinformatic tools, process X-ray data sets from a synchrotron source and solve the protein crystal structure by MAD. Students will process samples for the negative stain procedure of electron microscopy and visualise stained particles. They will experience sample preparartion for cryo-EM and how to acquire Low-Dose images. Cryo-EM data will be processed for 3-D reconstruction.
Learning outcomes	Students acquire expertise in state-of-the-art methods of solving three-dimensional protein structures and the architecture of large protein complexes.
Type of examination	Written report on or assessment of the practical laboratory course or written report on and assessment of the practical laboratory course
Type of assessment	The successful completion of the module will be graded.

Module: WP 24 Introduction to Informatics: Systems and Applications

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 24.1 Lecture on Introduction to Informatics: Systems and Applications	SoSe	30 h (2 SWS)	60 h	(3)
Exercise course	WP 24.2 Tutorial Introduction to Informatics: Systems and Applications	SoSe	45 h (3 SWS)	45 h	(3)

For successful completion of the module, 6 ECTS credits have to be acquired. Class attendance averages about 5 contact hours. Including time for self-study, 180 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Regelsemester: 2
Duration	The completion of the module takes 1 semester.
Content	Together with the lecture on Introduction in Informatics: Programming and Software Development this course is the basis for the university education in Informatics as a minor subject. Therefore, the content is a broad introduction on the most important topics of Informatics in a low-level and application orientated way. Students acquire the basics to understand advanced topics from this field: - Fundamentals in computer hardware (von-Neumann model, multicore processors, working memory, permanent memory, etc.) - Fundamentals in operating systems (process model, syncronisation of concurrent processes, memory management, etc.) - Fundamentals in computer networks (ISO/OSI model, etc.) - Fundamentals in data base systems (relational model, relational algebra, SQL, ect)

	- Fundamentals of data mining (classification, cluster analysis, rules of association, etc.) The module consists of a lecture and tutorials in small groups. Topics of the lecture are practiced in the tutorials by practical applications.
Learning outcomes	Low-level and application orientated knowledge of the mot important fundamentals in Informatics. The course aims at a basic understanding of the important processes in a computer system, seen from the hardware point of view and from the operating system point of view. In addition, students learn fundamentals of data base systems and data mining on a academic level.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Dr. Christian Böhm
Language(s)	English

Module: WP 25 Computer Architecture

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 25.1 Lecture on computer architecture	SoSe	45 h (3 SWS)	45 h	(3)
Exercise course	WP 25.2 Tutorial Computer Architecture	SoSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 6 ECTS credits have to be acquired. Class attendance averages about 5 contact hours. Including time for self-study, 180 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Regelsemester: 2
Duration	The completion of the module takes 1 semester.
Content	This module gives an overview of the binary presentation of information on a computer and an overview of the architecture and the principle of operation of modern computers using von-Neumann's model. Classic components of a computer are introduced.
Learning outcomes	Students get a basic understanding of the architecture of modern computers.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Dr. Claudia Linnhoff-Popien
Language(s)	English

Additional information

Module: WP 26 Coding und Modeling

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 26.1 Lecture on Coding and Modeling	SoSe	30 h (2 SWS)	30 h	(2)
Exercise course	WP 26.2 Tutorial Coding and Modeling	SoSe	45 h (3 SWS)	75 h	(4)

For successful completion of the module, 6 ECTS credits have to be acquired. Class attendance averages about 5 contact hours. Including time for self-study, 180 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Regelsemester: 2
Duration	The completion of the module takes 1 semester.
Content	The module introduces the basic principles of coding and data modeling using a functional coding language (currently Haskell).
Learning outcomes	Students acquire knowledge on: - Proficiency in basic concepts of coding - Skills to functional code small algorithm and to evaluate them in comparison to imperative solutions - Praperation for future development of coding languages
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. PhD Martin Hofmann

Lecture	WP 27.0.6 Special lecture on Methods in Cell Biology	WiSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 9 ECTS credits have to be acquired. Class attendance averages about 6 contact hours. Including time for self-study, 270 hours have to be invested.

Module type	Compulsory elective module with compulsory elective courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1). With regard to the compulsory elective courses WP 27.0.1 - WP 27.0.6, three courses must be taken.
Entry requirements	None
Semester	Recommended semester: 2
Duration	The completion of the module takes 2 semesters.
Content	The module introduces special professional knowledge from the field of Cell Biology. Three lectures covering basic principles and current topics of Cell Biology are chosen.
Learning outcomes	Students acquire knowledge in basic principles in Cell Biology and are introduced to current research in Cell Biology. They broaden their already acquired knowledge with current and special topics from Cell Biology. New information get integrated in existing knowledge to formulate and discuss scientific problems. The acquired theoretical

	knowledge will be implemented during the practical course.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.

Module: WP 29 Main Topic Inorganic Chemistry – practical course

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Seminar	WP 29.1 Seminar in Inorganic Chemistry	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Practical laboratory course	WP 29.2 Advanced research practical course in Inorganic Chemistry	WiSe and SoSe	240 h (16 SWS)	120 h	(12)

For successful completion of the module, 15 ECTS credits have to be acquired. Class attendance averages about 18 contact hours. Including time for self-study, 450 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	Master's Programme Chemistry
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Recommended semester: 2
Duration	The completion of the module takes 2 semesters.
Content	Students work in a research group from the field of Inorganic Chemistry. Supervised by a professional scientist students get involved in a current research project. During the **practical course** they apply modern techniques and complement and deepen their methodical skills and theoretical knowledge. Students learn to plan and execute scientific experiments independently. At the **accompanying seminar** students extend their expertise of the research topic and present and discuss their own research results.
Learning outcomes	Students acquire expertise for work in research: - independent, target-oriented literature search - transfer of theoretical knowledge to practical applications - planning and execution of complex experimental set-ups - recognition and estimation of security questions while handling hazardous material

	- decision making and critical interpretation and evaluation of experimental data - appraisal, presentation and discussion of research data and results
Type of examination	Practical course report or practical course evaluation
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.

Module: WP 38 Introduction in Coding

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 38.1 Lecture on Introduction in Coding	WiSe	60 h (4 SWS)	120 h	(6)
Exercise course	WP 38.2 Tutorial Introduction in Coding	WiSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 9 ECTS credits have to be acquired. Class attendance averages about 6 contact hours. Including time for self-study, 270 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Recommended semester: 3
Duration	The completion of the module takes 1 semester.
Content	The module gives an introduction in the imperative, object orientated, and concurrent coding using a higher coding language, e.g. Java. The module cover skills in coding and general fundamentals, concepts, methods, and technics to present, structure and process data. The module covers: - Fundamental terms of programmes and their execution - Syntax of coding languages and their description - Basic data types and imperative control structures - Complexity and correctness of imperative programmes - Recursion - Simple sorting mechanisms - Introduction in object orientated coding dafts - Classes, interfaces, packages etc.
Learning outcomes	
Type of examination	Written exam or oral examination

Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Practical laboratory course	WP 40.1 Practical course in Subject specific Extension Topic in Biochemistry	WiSe and SoSe	150 h (10 SWS)	120 h	(9)

For successful completion of the module, 9 ECTS credits have to be acquired. Class attendance averages about 10 contact hours. Including time for self-study, 270 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Recommended semester: 3
Duration	The completion of the module takes 1 semester.
Content	The module introduces students to current, Biochemistry-related research topics. Students work on a selected scientific project and are integrated in a research group. Students acquire the fundamentals of the selected research topic on the level of a scientific orientated Master's programme and develop possible solutions to open scientific problems.
Learning outcomes	- Independet application of acquired skills and competences on a scientific problem - Evaluation of the own research results - Written presentation of results in reference to the scientific environment - Professional presentation of results
Type of examination	Written report on or assessment of the practical laboratory course or written report on and assessment of the practical laboratory course
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of	ECTS credits will be granted when the module examination (or the

ECTS credits	examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Dr. Heidi Feldmann
Language(s)	English

Additional information

Module: WP 41 Subject specific Extension Topic in Biochemistry

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 41.1 Lecture on Subject specific Extension Topic in Biochemistry	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 41.2 Advanced Topics in Subject specific Extension Topic in Biochemistry	WiSe and SoSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 6 ECTS credits have to be acquired. Class attendance averages about 4 contact hours. Including time for self-study, 180 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Recommended semester: 3
Duration	The completion of the module takes 1 semester.
Content	This module complements knowledge in Biochemistry. Students select two Biochemistry-related courses.
Learning outcomes	The courses introduce students to up-to-date topics of Biochemistry. Students broaden their knowledge with current and special information. This information should get intregrated in existing knowledge to express and discuss scientific problems. The acquired knowledge will be implemented during the practical course.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.

Responsible contact	Dr. Heidi Feldmann
Language(s)	English

Module: WP 42 Extension Topic Biological Chemistry - practical course

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Practical laboratory course	WP 42.1 Research practical course in Biological Chemistry	WiSe and SoSe	150 h (10 SWS)	120 h	(9)

For successful completion of the module, 9 ECTS credits have to be acquired. Class attendance averages about 10 contact hours. Including time for self-study, 270 hours have to be invested.

Module type	Compulsory elective module with mandatory courses
Usability of the module in other Programmes	Master's Programme Chemistry
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1).
Entry requirements	None
Semester	Recommended semester: 3
Duration	The completion of the module takes 1 semester.
Content	Students work in a research group from the field of Biological Chemistry. Supervised by a professional scientist students get involved in a current research project. During the practical course they apply modern techniques and acquire methodical skills and theoretical knowledge in Biological Chemistry. Students learn to plan and execute scientific experiments independently.
Learning outcomes	Students acquire expertise for work in research: - Independent, target-oriented literature search - Transfer of theoretical knowledge to practical applications - Planning and execution of complex experimental set-ups - Recognition and estimation of security questions while handling hazardous material - Decision making and critical interpretation and evaluation of experimental data - Appraisal, presentation and discussion of research data and results

Type of examination	Written report on or assessment of the practical laboratory course or written report on and assessment of the practical laboratory course
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.

(For detailed information on the elective guidelines see description of Module WP 1). With regard to the module`s courses, WP 54.1 and three of the compulsory elective courses WP 54.2.1 - WP 54.2.5 must be taken. In doing so, at last two of the compulsory elective courses WP 54.2.1 - WP 54.2.3 must be taken.
Entry requirements	None
Semester	Recommended semester: 3
Duration	The completion of the module takes 1 semester.

Content	The module broadens and deepens special professional knowledge from the field of Inorganic Chemistry. Three advanced lectures covering current topics of Inorganic Chemistry are chosen.
Learning outcomes	Students are introduced to up-to-date topics of current research in Inorganic Chemistry. They broaden their already acquired knowledge with current and special topics from Inorganic Chemistry. New information get integrated in existing knowledge to formulate and discuss scientific problems. The acquired theoretical knowledge will be implemented during the practical course.
Type of examination	Written exam or oral examination
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Dr. Klapötke
Language(s)	English
Additional information	

Module: WP 55 Main Topic Organic Chemistry

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Colloquium	WP 55.1 Subject-specific colloquium in Organic Chemistry	WiSe and SoSe	45 h (3 SWS)	135 h	(6)

Course type	Course (compulsory elective)	Rotation	Contact hours	Self-study hours	ECTS
Lecture	WP 55.2.1 Physical-Organic Chemistry	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 55.2.2 The Chemistry of Heterocycles	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 55.2.3 Modern Synthetic Methods	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 55.2.4 Synthesis Planning	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 55.2.5 Glycochemistry	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 55.2.6 Radicals in Chemistry and Biology	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 55.2.7 Lecture in Chemical Biology	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 55.2.8 Advanced Topics in Chemical Biology	WiSe and SoSe	30 h (2 SWS)	60 h	(3)
Lecture	WP 55.2.9 Spezielle Special Lecture in Organic Chemistry	WiSe and SoSe	30 h (2 SWS)	60 h	(3)

For successful completion of the module, 15 credits have to be acquired, including 9 ECTS credits from compulsory elective courses. Class attendance averages about 9 contact hours. Including time for self-study, 450 hours have to be invested.

Module type	Compulsory elective module with mandatory and compulsory elective courses.
Usability of the module in other Programmes	Master's Programme Chemistry
Elective guidelines	With regard to the compulsory elective modules WP 1 - WP 57, modules must be taken with a total value of 45 ECTS credits. (For detailed information on the elective guidelines see description of Module WP 1). With regard to the module's courses, WP 55.1 and three of the compulsory elective modules WP 55.2.1 - WP 55.2.9 must be taken.

Module: P 6 Master's Degree Module

Programme	Master's Programme: Biochemistry (Master of Science, M.Sc.)

Related module parts

Course type	Course (mandatory)	Rotation	Contact hours	Self-study hours	ECTS
Master's thesis	P 6.1 Master's thesis	WiSe and SoSe	-	900 h	(30)

For successful completion of the module, 30 ECTS credits have to be acquired and 900 hours have to be invested.

Module type	Mandatory module
Usability of the module in other Programmes	
Elective guidelines	None
Entry requirements	Successful completion of the modules P 1 - P 3 and P 5
Semester	Recommended semester: 4
Duration	The completion of the module takes 1 semester.
Content	Focus of the thesis is the work on a special question from Biochemistry, Cell Biology, Microbiology or any Extension Topic, including a written scientific report.
Learning outcomes	Competence to compile and present a focused topic during 6 month in a complete manner. Ability to work in a team and on a project. The students get theoretical and practical understanding in specific challenges in biochemistry, Cell Biology, Microbiology or any Extension Topic. They can design and execute experiments addressing a given topic correctly, as well as present and discuss the results in a report in form and content properly.
Type of examination	Master's thesis
Type of assessment	The successful completion of the module will be graded.
Requirements for the gain of ECTS credits	ECTS credits will be granted when the module examination (or the examination of pertinent mandatory and potential elective compulsory module parts) has/have been completed successfully.
Responsible contact	Prof. Beckmann
