

Student name:

Requirements for a practical research course:

The practical research course is an all-day course of at least 8 weeks during a running semester when lectures have to be attended. During lecture-free times the course will last at least 6 weeks. During the course it is obligatory to participate in the seminars of the respective research group the candidate works in. At the end of the practical research course a final research report will have to be prepared and the gained data will have to be presented by the candidate in a seminar. Practical work, research report and the final seminar presentation will be evaluated and used for the grading of the research practical course.

I have taken note of the above requirements for the practical research course in Biochemistry/Cell Biology/Inorganic, Organic or Physical Chemistry for the Master of Biochemistry.
